EDUCATION

Nov 2024 - Jul 2027 expected

LEBANESE UNIVERSITY FACULTY OF TECHNOLOGY -ABEY

Bachelor of Business Computer

July 2024

CHOUF NATIONAL COLLEGE - CHOUF, MOUNT LEBANON

High School Diploma

SOFT SKILLS

- Effective Leadership
- Comprehensive Critical-thinking
- Strategic Problem-solving
- Practical Creativity
- Productive Teamwork

LANGUAGES

- English: Fluent
- Arabic: Native

HARD SKILLS

Programming Languages
- JavaScript
- TypeScript
- C
- Python
- Assembly x86

Frontend Development
- React
- Tailwind CSS

Backend Development
- Nest.js
- Prisma ORM

Tools & Technologies
- Git & GitHub
- Docker

EXPERIENCE

Full Stack Web Development Internship- MednMind

APRIL 2026 - JULY 2026

- Developed the Admin Dashboard with responsive frontend and backend APIs for user management, patient statistics, and trial period administration.
- Built the Report Page with date-range filtering and comprehensive Revenue, Staff, and Insurance reports by developing frontend components and extending backend APIs and database queries.

Machine and deep learning-based classification of diabetic peripheral neuropathy using plantar pressure data- TogetherforChehim

JUN 2026 - SEP 2026

- Developed and evaluated machine learning and deep learning models for plantar-pressure-based neuropathy classification, covering both binary classification (neuropathy vs. no neuropathy) and 4-class classification (GC, GD, NL, NS).
- Implemented and compared CatBoost, XGBoost, Linear Regression, SVM, and Random Forest models for traditional machine learning classification.
- Designed and trained a custom CNN architecture using Stratified 5-Fold Cross-Validation for plantar pressure image classification.
- Applied transfer learning with ResNet-18, adapting the architecture to multi-channel plantar pressure data and evaluating its performance on binary and multiclass tasks.
- Performed SHAP analysis to interpret machine learning predictions and identify the most influential plantar-pressure features.
- Applied Grad-CAM, Grad-CAM++, and Occlusion Sensitivity to visualize model attention and identify influential regions of plantar pressure maps for deep learning interpretability.
