EDUCATION

Nov 2024 – Jul 2027 (expected)
Lebanese University, Faculty of Technology – Abey
Bachelor of Business Computer

July 2024
Chouf National College – Chouf, Mount Lebanon
High School Diploma

SOFT SKILLS

- Effective Leadership
- Comprehensive Critical-thinking
- Strategic Problem-solving
- Practical Creativity
- Productive Teamwork

LANGUAGES

- English: Fluent
- Arabic: Native

HARD SKILLS

Languages: JavaScript, TypeScript, C, Python, Assembly x86
Frontend: React, Tailwind CSS
Backend: Nest.js, Prisma ORM, PostgreSQL
Tools: Git & GitHub, Docker

EXPERIENCE

MednMind – Full Stack Web Development

Full Stack Developer | JUL 2026 – OCT 2026

- Developed full-stack financial features with React, NestJS, TypeScript, and PostgreSQL, including commission/salary settlements, running balances, and custom income/expense tracking.
- Built financial and patient reporting with cash-flow analytics, patient wallet data, revenue metrics, and configurable date-range filtering.
- Developed patient management workflows: patient source tracking, detailed patient profiles, and dashboard-based patient switching.
- Implemented diagnosis autocomplete and medicine/dosage suggestions to speed up consultation data entry.
- Implemented role-based access control (RBAC) to restrict access to sensitive medical history.
- Built patient groups, custom messaging, and per-organization WhatsApp usage tracking; contributed to appointment booking and fixed reminder bugs to improve notification reliability.

Full Stack Web Development Intern | APR 2026 – JUL 2026

- Developed the Admin Dashboard with responsive frontend and backend APIs for user management, patient statistics, and trial period administration.
- Built the Report Page with Revenue, Staff, and Insurance reports, creating frontend components and extending backend APIs and database queries.

TogetherforChehim – Diabetic Neuropathy Classification (ML/DL)

Machine & Deep Learning Project | JUN 2026 – SEP 2026

- Developed and evaluated ML and DL models for plantar-pressure-based neuropathy classification, covering binary (neuropathy vs. no neuropathy) and 4-class (GC, GD, NL, NS) tasks.
- Implemented and compared CatBoost, XGBoost, Linear Regression, SVM, and Random Forest models for traditional ML classification.
- Designed and trained a custom CNN using Stratified 5-Fold Cross-Validation for plantar pressure image classification.
- Applied ResNet-18 transfer learning, adapting the architecture to multi-channel plantar pressure data and evaluating it on binary and multiclass tasks.
- Performed SHAP analysis to interpret ML predictions and identify the most influential plantar-pressure features.
- Applied Grad-CAM, Grad-CAM++, and Occlusion Sensitivity to visualize model attention and identify influential regions of plantar pressure maps.

PROJECTS

BraTS 2021 Brain Tumor Segmentation | PyTorch, MONAI | GitHub

- Built a PyTorch/MONAI 3D segmentation pipeline and trained a U-Net baseline for 5 epochs on all 1,251 BraTS 2021 training cases: 80.5 / 62.9 / 66.2 Dice (WT / TC / ET) on a 25% patient-level hold-out. MGMT status (Task 2): 0.566 ROC-AUC in 5-fold CV.

Kaggle Playground S6E9: EV Purchase Prediction | Python, LightGBM, CatBoost, XGBoost | GitHub

- Ranked 167 of 3,575 (top 4.7%) with 0.94560 private ROC-AUC, using digit-decomposition features, leak-free in-fold target encoding, and a rank/probit-space ensemble of 3 model families.

HTTP Server & QR Code Generator | C | HTTP Server QR Generator

- Built an HTTP server in C on Linux TCP sockets that parses GET requests and serves HTML; built a command-line QR code generator that outputs PNG images.
